

**Overall flow:**

1. Connects to a Xero demo company
2. Pulls Accounts and Vendors lists
3. Saves them to my local machine
  - a. Since the PDF doesn't specify it, so I'll just save JSON and CSV file

**User flow:**

1. Server starts and connects to the Demo Company on Xero
2. User clicks the "Sync Accounts and Vendors" button
  - o Server make API calls to fetch the lists
3. Users go to the specified path and should find the output file containing the Accounts and Vendors lists.

**Creating new app on Xero:**

- Using the "Custom connection" option on Xero, since it looks obvious with connecting to a demo company.

**Deliverables(with PHP and React):**

- Users can connect to the demo company on Xero
- Users can fetch the lists of Accounts and Vendors from Xero
- Users can open the lists stored on their laptop.
